

## GCC Animal Intake Policy

- Upon trapping each cat, asses them for any injuries or open wounds.
- Pay close attention to the mouth and note any drooling or foul odor, which could be a sign of infection.
- Notice the eyes and check for any discharge or other abnormalities.
- Any cats with these serious conditions shall be seen by our local vet and not just TNR'd and returned. The vet will asses them and take the necessary steps in order to treat them.
- Note any friendly cats which we can place for adoption and do not take them to the TNR clinic.
